**SALE TERMS & CONDITIONS:** Terms of the sale are cash unless prior arrangements have been made. Every lot will be sold to the highest bidder with the auctioneer settling disputes as to bids. All cattle are the buyer's property as soon as sold. All announcements made from the auction block on sale day by the owner or auctioneer will take precedence over statements in the sale catalog.

**Guarantee:** Every animal in this sale is, to the best of our knowledge, free from any disease or defect. All animals are guaranteed breeders. We guarantee the first 60-day breeding season, not to exceed 6 months from of delivery date. If an animal fails to breed after a period of six months, it may be returned to the seller in good condition and in compliance with Montana Health Regulations. The seller reserves the right to try said animal for six months and if it proves to be a non-breeder, either an animal of comparable value will be substituted or credit will be given in a future sale on an animal for animal basis. All pregnant females are considered breeders. No other warranty of any nature is express or implied.

**Health:** Each bull will pass a semen test before leaving the ranch. The health of the herds is excellent. We guarantee that all sale cattle will be able to ship to any state or Canadian province. All females are officially calf hood Bangs vaccinated. All cattle are on a pre-conditioning program and herd health program.

**Feed Arrangements:** Bulls will be fed until April 1 at no cost. After said date, buyers will be charged for feed until delivery, at buyer's risk.

**Delivery:** Free delivery within 500 miles or purchases exceeding \$5,000. Additional delivery beyond 500 miles will be charged at cost to central point's anywhere in United States. For Canadian buyers, we will deliver up to nearest points of entry. Reputable purebred livestock haulers will be contracted for delivery.

**Liability:** All persons attending the sale do so at their own risk. Neither the owners nor any person associated with the sale assumes any liability, legal or otherwise.

**Semen Interest:** L Bar W retains the right of a ¼ in-herd semen interest in all bulls selling.

**Accommodation:** Ask for the L Bar W Sale Rate at the Super 8, in Columbus, 406-322-4101  
Numerous other accommodations available in Billings and Bozeman, Montana.

# Greetings,

Let us extend our heart felt welcome to our eighth annual L Bar W bull sale. We look forward to renewing friendships and meeting new friends. We appreciate the opportunity to present what we believe is the best group of young bulls we have ever raised. They represent our continuing efforts to meld the best in Hereford genetics into our cow herd. We continue to expand our ET program and you will see some exemplary examples of our breeding plan going forward in this class. Our herd shows what using this technology can do for your herd in just a short time. It is exciting.

Our focus is on producing quality, long lived cattle with traits the commercial breeder will appreciate; fertility, maternal instincts, easy calving, superior marbling and strong growth wrapped up in moderate framed animal with good bone growth and superior feet. Bottom line, we strive for a balanced profile and do not stress just one trait.

We view a bright future for the American cattle industry. Prices are up across the spectrum, obviously driven by the reduction in the cattle herds due to drought and continuously increasing input costs, yet those who can work through these challenges, will benefit on the other side with higher demand and prices for the foreseeable future. We believe that the Hereford bull crossed with other black cattle yields an exceptionally fertile and efficient cow which will increase your bottom line.

Please join us before the sale and walk through our offering. We think you will agree that this year's crop is one of the best we have offered.

Thanks for coming. We appreciate your business.

Mike and Jeannette Walen and Carl and Denise Loyning.  
Taylor and Amanda Romine and Savannah Fredrickson.

## **HORNED HEREFORDS** *raised and developed* *for* **LONGEVITY, FERTILITY and PREDICTABILITY**

### **2024 HERD HEALTH**

All bulls received a breeding soundness exam by Dr. Lacey Fahrmeier of Stillwater Veterinary Clinic, on February 14th, 2024. Scrotal measurements listed in catalog were taken January 22, 2024.

### **BULLS**

**Birth:** Calf Guard, Alpha C&D, & Multi-Min

**Branding:** Inforce 3, Ultrachoice 8, Multi-Min, & Pink Eye

**Pre-Weaning:** Pyramid 5 Plus Presponse, UltraBac 7 w/ somubac, & Multi-Min

**Post Weaning:** Pyramid 5 Plus Presponse, UltraBac 7 w/ somubac, poured with Ultra saber, and drench with Valbazen.

**Mid Development:** Multi Min and Cleanup pour on. All bulls received 2 rounds of Fusogard Foot rot vaccine

**Breeding Soundness Exam:** Bovishield Gold FP5VL5 & Ultra Boss pour on

# AHA GE·EPD

## The Power of Genomically Enhanced EPDs

The American Hereford Association (AHA) has embraced the use of genomics into their genetic evaluation by launching a first of its kind single step analysis that utilizes the marker effects of specific traits. Likewise, AHA is directly estimating accuracy values rather than approximating. The direct estimation of accuracy results in a more conservative value but a more accurate value than previous methodologies. The AHA is producing the most reliable genetic evaluation that is supported by Whole Herd TPR™ and genomics, which will give prospective buyers added confidence in purchasing young and unproven animals.

Buying animals that have a genomic profile incorporated into their Expected Progeny Difference (EPD) offers many advantages that allow for quicker breed and herd improvement. Below is a table showing the average increase in accuracy when buying a young animal with a Genomic Enhanced EPD (GE-EPD) versus an animal without a GE-EPD. Similarly, an effective progeny number increase is listed by trait that shows how many progeny equate to a genomic enhancement of a young animal (e.g. yearling). That's right, buying a young animal that has been genotyped is like having 2-17 progeny, depending on the trait. The proof gained on young, non-parent animals, through a genomic enhancement is valuable and greatly mitigates the risk and allows for more directed selection.

Each animal tested is recognized with the AHA GE-EPD logo.

AHA Trait	Accuracy Improvement	Effective Progeny Number Increase*
Calving Ease	0.09	17
Birth Weight	0.12	8
Weaning Weight	0.14	12
Yearling Weight	0.16	9
Scrotal Circumference	0.17	6
Mature Cow Weight	0.12	4
Udder Suspension	0.17	7
Teat Size	0.17	7
Carcass Weight	0.11	3
Fat	0.08	2
Rib-Eye Area	0.07	2
Marbling	0.10	3

\* Effective Progeny Number Increase (EPNI)- EPNI is the difference gained for genotyped animals versus non-genotyped animals.

## *Yearling Bulls*

This group of yearling bulls represents our top 2/3rd of our 2023 calf crop. We again scanned the bulls for carcass data on February 2nd so please note that the EPD's were current as of 2/5/2024, they did not have the updated carcass data calculated as of this date. Updated EPD's will be available March 1, on our website [www.lbarw.com](http://www.lbarw.com).

We take pride in raising our bulls in a commercial cattleman's environment. These bulls are developed on a high roughage ration of dryland alfalfa hay, corn and a complete grower pellet under the direction of Hannah Imer, Livestock Product Specialist-Purina and Axmen Feed Store of Columbus. Our avg. daily gain on a 80 day test period was 3.25lbs. We are extremely happy with the condition of the bulls and we think you will be too.

“

Our L-W bull was the first non Angus bull we've ever bought. We had him out with all the cows, along with 3 black bulls, for about 3 days before moving him and a small group to a different pasture. Now that we are into calving, we have around 3 times as many white faced calves on the ground so his breeding ability speaks for itself. The calves are healthy, good size and we have had almost no complications or death loss thus far. He is also incredibly calm and easy to work when needed. Looking forward to adding another L-W bull to our program in the coming years.” Justin and Jasper Gruel

# 18 month old bulls

CL 1 Domino 9108G ET

For the operations that need to purchase an age advantage bull, this is a great offering. These bulls are bred to be female producers with a combination of ET and natural calves in this offering. They are all sired by the CL 1 Domino 9108G ET that we own with Johansen Herefords, UT and Coleman Herefords, CO. The 9108G daughters are beautiful feminine females with great udders. These bulls will sire an outstanding set of females for any operation.

**Take advantage of hybrid vigor by capitalizing on Hereford genetics.**

The Maternal Advantage program generates females with added longevity, more docility, increased fertility and more profit per year.

Can be utilized by producers using Hereford bulls on British-based cows or Brahman-based cows in their breeding program.

Producers utilizing the program will have access to a sire EPD summary, added market exposure, replacement selection tools, genetic improvement tools and access to AHA resources, marketing and staff.

## Qualifications

- Producers must verify that eligible females are sired by registered Hereford bulls with transferred ownership.
- Participating bull batteries must rank in the top 50% of the breed for Baldy Maternal Index (BMIS) if used on British-based cows or the top 50% of the breed for Brahman Influence Index (BIIS) if used on Brahman-based cows.

A very special Thank You to Noél Mendive. Noél has been our calving season help for the past 3 years. She is such a valued part of our operation during the busiest time of year for us. She checks each calf every morning to ensure the health of the calves stays on track. She has a gift and we beyond thankful for her watchful eye.

# Thank you.

Every year when I sit down to write the thank you paragraph I can't help but feel overwhelmed with emotion. Words cannot express how thankful we are for the friends that have

become family on this journey with us. It takes a village for this type of operation, and our village might be small but it's mighty. Thank you all for the help that you offer us each day of year, your friendship means the world to us.

In September during the Montana Hereford Tour we met a young lady from Deary, ID looking to find employment on a Hereford operation in Montana and at the time we were looking for a new team member. Long story short we welcomed Savannah Fredrickson to L Bar W Cattle Company the 1st of November. In the short time she has been with us, she fits in with the operation like a favorite pair of boots. She is a wonderful young lady and we are so blessed to have her as part of our team.

Taylor again has done a wonderful job with the bulls this year and Amanda is keeping the website fresh and up to date, keeping our Facebook page loaded with lots of day to day content, and for helping me with the endless amounts of paperwork. You both are a blessing to our operation and we thank you both for everything you do.

CATTLE COMPANY

# EXPLANATION OF BREED EPDS

## CALVING EASE — DIRECT (CE)

CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average, if comparably mated, sire A's calves would have an 8 percent more likely chance of unassisted calving when compared to sire B's calves.

## BIRTH WEIGHT (BW)

BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average, if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

## WEANING WEIGHT (WW)

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves. Yearling Weight (YW) YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

## MATERNAL MILK (MM)

The MM EPD of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

## MATERNAL MILK & GROWTH (M&G)

The M&G EPD reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of the daughter's progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10 lb. (29 minus 10 = 19 lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

## RIBEYE AREA (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

## MARBLING (MARB)

MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, [IMF]) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

## BALDY MATERNAL INDEX (\$BMI)

The BMI\$ is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Ribeye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

## CERTIFIED HEREFORD BEEF INDEX (\$CHB)

The Certified Hereford Beef Index is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows and all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. Keep in mind, this production system takes advantage of complimentary breeding with the commercial Angus cow. Although Marbling is weighted positively in this index, a positive weighting for Rib-eye Area and a negative weighting for Back Fat are a greater priority in this index to allow for optimum end-product merit. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

# THE HEREFORD ADVANTAGE PROGRAM

Increase added market power and brand recognition with feeder cattle sired by a Hereford bull battery ranking in the top 50% for CHB\$ index.

## PROGRAM BENEFITS:

- ✓ EPD ranking summary
- ✓ Added market exposure
- ✓ Genetic improvement tool
- ✓ Access to AHA resources
- ✓ Get started at [HerefordFeederCattle.com](http://HerefordFeederCattle.com)

Certified Hereford Beef Index(CHB\$) is a terminal sire index that is built on a production system where Hereford bulls are used on Angus-based cows with a focus on feedlot performance and end-product merit. To qualify for the Hereford Advantage program, cattle must be sired by registered Hereford bulls with transferred ownership, and the Hereford bull battery must have a CHB\$ value ranking in the top 50%.
