SALE TERMS & CONDITIONS: Terms of the sale are cash unless prior arrangements have been made. Every lot will be sold to the highest bidder with the auctioneer settling disputes as to bids. All cattle are the buyer's property as soon as sold. All announcements made from the auction block on sale day by the owner or auctioneer will take precedence over statements in the sale catalog.

Guarantee: Every animal in this sale is, to the best of our knowledge, free from any disease or defect. All animals are guaranteed breeders. We guarantee the first 60-day breeding season, not to exceed 6 months from of delivery date. If an animal fails to breed after a period of six months, it may be returned to the seller in good condition and in compliance with Montana Health Regulations. The seller reserves the right to try said animal for six months and if it proves to be a non-breeder, either an animal of comparable value will be substituted or credit will be given in a future sale on an animal for animal basis. All pregnant females are considered breeders. No other warranty of any nature is expressed or implied.

Health: Each bull will pass a semen test before leaving the ranch. The health of the herd is excellent. We guarantee that all sale cattle will be able to ship to any state or Canadian province. All females are officially calf hood Bangs vaccinated. All cattle are on a pre-conditioning program and herd health program.

Feed Arrangements: Bulls will be fed until April 1 at no cost. After said date, buyers will be charged for feed until delivery, at buyer's risk.

Delivery: Free delivery within 1,000 miles on purchases exceeding \$5,000. Additional delivery beyond 1,000 miles will be charged at cost to central point's anywhere in United States. For Canadian buyers, we will deliver up to nearest points of entry. Reputable purebred livestock haulers will be contracted for delivery.

Liability: All persons attending the sale do so at their own risk. Neither the owners nor any person associated with the sale assumes any liability, legal or otherwise.

Semen Interest: L Bar W retains the right of a ¼ in-herd semen interest in all bulls selling.

Accommodation: Ask for the L Bar W Sale Rate at the Super 8, in Columbus, 406-322-4101. Numerous other accommodations available in Billings and Bozeman, Montana.

Greetings all to the 9th Annual L Bar W Production Sale

It is such a pleasure to welcome all of you to our spring production sale on March 12, 2025. It is hard to believe that this is our ninth go round. It has been so exciting to grow this business with you since our ground floor entrance into the Hereford seedstock business. Without your friendship and support, we would not be here today. Thank you so much for coming. We hope that our offering will provide the type and kind of Hereford cattle that will help you grow a profitable and sustainable business.

Our goal is to produce consistent bulls that will thrive in every environment with traits that the cattleman looks for to produce the best calves for the market. Our bulls are long, thick made, easy fleshing, and feed efficient, with good bone, excellent feet and overall structural soundness. We focus on good growth characteristics combined with superior carcass merit. We pay particular attention to marbling as that trait will improve the herds grade output which will make our cattle more attractive in the marketplace. Along those lines, we take part in the AHA Feedout Program where we track the improvement in our herd and integrate those findings into our breeding plans. So far, we have seen considerable improvement in grade and yield. Most interesting information, which we will pass on to our customers. We try to produce bulls that are not overly fat and show good muscle development. A key item for us is a bull that is active yet easy to handle and will move out good. A lazy bull is useful to no one.

Additionally, we recognize a superior bull will only come from a superior cow and that is why we are extremely proud of our cow herd. Our cows are very fertile, breed up within the expected window. They are very docile mothers who produce abundant milk. Their udders and teats are fantastic and they pass that trait on to their replacement females.

We cull rigorously. We refuse to let inferior animals remain in our herd. We believe that is why we have so few bulls returned. If you buy an L Bar W bull, that guy will work for you on day one. All the bulls are semen checked prior to the sale. If they fail, they are taken out of the sale. All the bulls are fully guaranteed.

Please take time to stop by the ranch to view our bulls before the sale. They will be on display at the sale barn and we would like to take you on a tour of our cowherd and herd bulls. Please contact Carl, Denise, or Mike if you are interested.

Thanks again.

Mike and Jeannette Walen
Carl and Denise Loyning
Taylor and Amanda Romine

2025 HERD HEALTH

All bulls received a breeding soundness exam by Dr. Lacey Fahrmeier of Stillwater Veterinary Clinic, on February 14th, 2025. Scrotal measure listed in catalog were taken January 16, 2025

BULLS

Birth: Calf Guard, Alpha C&D, & Multi-Min

Branding: Inforce 3, Ultrachoice 8, Multi-Min, & Pink Eye

Pre-Weaning: Pyramid 5 Plus Presponse, UltraBac 7 w/ somubac, & Multi-Min

Post Weaning: Pyramid 5 Plus Presponse, UltraBac 7 w/ somubac, poured with Ultra saber, and drench with Valbazen.

Mid Development: Multi Min and Cleanup pour on. All bulls have been vaccinated for footrot

Breeding Soundness Exam: Bovishield Gold FP5VL5 & poured

REPLACEMENT HEIFERS

Birth: Calf Guard, Alpha C&D, & Multi-Min

Branding: Inforce 3, Ultrachoice 8, Multi-Min, & Pink Eye

Pre-Weaning: Pyramid 5 plus Presponse, Pink Eye & Multi-Min

Post Weaning: Pyramid 5 plus Presponse, UltraChoice 8, and drench with Valbazen.

Pre-Breeding Shots: By sale time heifers will have received 2 rounds of Bovishield Gold FP5VL5 and poured. They have been freeze branded to match tattoo/tag numbers

Bangs Vaccinated October 30, 2024 – All heifers were given a shot of Lutelyse at this time as well.

AHA GE·EPD

The Power of Genomically Enhanced EPDs

The American Hereford Association (AHA) has embraced the use of genomics into their genetic evaluation by launching a first of its kind single step analysis that utilizes the marker effects of specific traits. Likewise, AHA is directly estimating accuracy values rather than approximating. The direct estimation of accuracy results in a more conservative value but a more accurate value than previous methodologies. The AHA is producing the most reliable genetic evaluation that is supported by Whole Herd TPR™ and genomics, which will give prospective buyers added confidence in purchasing young and unproven animals.

Buying animals that have a genomic profile incorporated into their Expected Progeny Difference (EPD) offers many advantages that allow for quicker breed and herd improvement. Below is a table showing the average increase in accuracy when buying a young animal with a Genomic Enhanced EPD (GE-EPD) versus an animal without a GE-EPD. Similarly, an effective progeny number increase is listed by trait that shows how many progeny equate to a genomic enhancement of a young animal (e.g. yearling). That's right, buying a young animal that has been genotyped is like having 2-17 progeny, depending on the trait. The proof gained on young, non-parent animals, through a genomic enhancement is valuable and greatly mitigates the risk and allows for more directed selection.

Each animal tested is recognized with the AHA GE-EPD logo.

AHA Trait	Accuracy Improvement	Effective Progeny Number Increase*
Calving Ease	0.09	17
Birth Weight	0.12	8
Weaning Weight	0.14	12
Yearling Weight	0.16	9
Scrotal Circumference	0.17	6
Mature Cow Weight	0.12	4
Udder Suspension	0.17	7
Teat Size	0.17	7
Carcass Weight	0.11	3
Fat	0.08	2
Rib-Eye Area	0.07	2
Marbling	0.10	3

* Effective Progeny Number Increase (EPNI)- EPNI is the difference gained for genotyped animals versus non-genotyped animals.

No words can express our gratitude for what Bill has done for our operation. He was at every event and sale we have ever had here at the ranch. He helped us market our cattle and sort our cattle whenever we asked and always did so with a smile and a good story. Personally, he taught me a lot about how to handle and move cattle with ease. A true cattleman and a great mentor. I feel I'm better for having know him. Thanks again for everything Bill, and keep a watchful eye on the bosses herd. Carl Loyning

This group of yearling bulls represents the top two thirds of our 2024 calf crop. 100% of these bulls have AHA GE EPDs to increase the accuracy of their EPDs, and are parent verified through this process. This must be our most even set of bulls that we have offered. We have developed these bulls on a high roughage ration of alfalfa hay, corn and a complete grower pellet under the direction of Hannah Imer, Livestock Product Specialist-Purina and Axmen Feed Store of Columbus. Our average daily gain on an 80-day test period was 3.25lbs.

No matter what phase of beef production you are in, we are committed to providing bulls that come from strong cow families. They are fertile, easy-fleshing and well pigmented. The consistent quality across the board, as well as EPD's and Profit indexes, shows our commitment for balanced EPD's vs. single trait selection.

We scanned the bulls for carcass data on January 22, 2025, so please note that the EPD's were current as of 1/27/2025, and did not have the updated carcass data calculated as of this date. Updated EPD's will be available March 1, on our website www.lbarw.com.

We take pride in raising our bulls in a commercial cattleman's environment. We are extremely happy with the condition of the bulls, and we think you will be too!

An outcross explosion in these M8086 sons. We made the decision to try a little something different with Stardance M8086 ET sire. 4003M has a pedigree that will work on just about any operation. The M8086 calves have really impressed us with their calving ease and growth. Great option for a heifer bull with added carcass merit. #2 bull in the sale offering with an actual IMF of 4.06; Ratio 158.

4126M is almost a complete carbon copy of this grandsire 6128D. Use him on a set of black momma cows and smile all the way to bank at weaning time. Scanned a 12.1 actual REA and 122 IMF ratio.

- Big Scrotal bull at 39cm

“

"We have multiple generations of L Bar W bred cattle at the Three Hills Ranch and there's a reason we keep coming back for more. Not only are the cattle we've purchased from Mike and Carl some of the best, but their offspring continue to exceed our expectations year after year. Whether it's getting the cows bred or the cows getting bred and weaning a big calf in the fall, our L Bar W cattle do it and do it well. We'll be back this year and many more to come" Three Hills Ranch, IA

18 Month Old Bulls

Our offering of age advantage bulls is small this year, but the quality runs deep. These older bulls are a perfect option for producers running on big country, that need to have bulls that will get out and get the job done. We have recognized there is a demand for horned age-advantage bulls in the industry and these guys check all the boxes. Stout, red to the ground, and ready for a job.

L2304 and L2306 are full brothers out the great 720E donor who has produced progeny that is at work throughout the county.

The L2302 bull is so easy on the eye. We love his look and phenotype.

2 Year Old Bulls

These older mature bulls are fault free and ready to get to work. They are going to hold together, travel, and get cows bred in any environment. These older type bulls have excelled in Texas and Mexico.

A rustic wooden post with barbed wire in a field of tall grass under a blue sky. The post is weathered and has several holes in it. The grass is tall and green, with some purple flowers. The sky is clear and blue.

After much consideration we have decided to offer a select set of replacement females this year. We are extremely proud of our cow herd, and we feel these females will offer an excellent opportunity. All of these females offered are progeny of our most current sire battery. We have developed these females slow with an average gain of 1.95# per day. By sale day they will be averaging about 900#. They are in great condition to start breeding this spring.

We love the 5044C daughters, they just flat get the job done. This mating of 075H will be an excellent one. 4114M is a twin to another heifer 41 and raised by another cow, but don't hold that against her.

Little did we know that when the NILE Merit Heifer committee paired us with Lane Hess back in the fall of 2020, that he would become such an important part of our team. He is such a pleasure to have around the operation. He has learned the ropes quickly here working on the weekends and throughout the summer. As he enters his next chapter of life, heading off to college in the fall, we want to wish him the very best. He will defiantly be leaving a void here, but we are beyond excited to see what the future holds for him. Thank you Lane, for always being here when we needed you and tackling whatever tasks we throw at you. Best of luck in the future. We will miss you.

BALDY HEIFERS

30 - 35 F1 BLACK BALDY OPEN HEIFERS

3210 ANGUS

JOHN PATTERSON FAMILY | COLUMBUS, MT

3210 Angus began 43 years ago with the purchase of one bred heifer and eight 14-16 year old proven cows from Wayne Stevenson at Basin Angus. From that foundation we began breeding and building our herd using some of the best proven sires of the Angus Breed and retaining heifers. Our cowherd was predominately Rito and Traveler based and we sold bulls private treaty and consigned to Midland Bull Test. In 2015 we sold the heart of our herd to Hoffman Ranch in Nebraska retaining our proven older females and the young end of our herd, additionally we purchased a pot load of running age purebred females from the Vermilion Ranch. That purchase proved successful and added even more maternal strength to our herd.

Today our genetic base is made of Connealy Thunder, Connealy Countdown, Leachman Right Time genetics and Schaff Angus Valley bloodlines. Our selection pressure has always been maternal based demanding good feet, udders, fleshing ability and disposition. Our cowherd runs entirely on dryland pastures and we range calve beginning April first. My wife Pam passed away in 2017 and at that time we as a family decided to retain our purebred Angus herd but use Hereford bulls to take advantage of highbred vigor and produce F1 replacement heifers. Our cowherd remains 100% purebred Angus and we sell all our calves. Our herd sires include several flush brothers from Hoffman Ranch (their Dam is Holden Herefords famous 1010Y Donor) and the last several years purchasing very top end bulls from L Bar W. The L Bar W bulls added 50# to our weaning weight the first year, plus incredible disposition, flawless feet and legs and excellent fleshing ability. We're proud to offer our very BEST F1 females for your consideration. These females are backed by superior genetics, proven health protocol, and fed a complete year round mineral package. These no brand heifers are extremely gentle. Our sincere thanks to our friends at L Bar W, we're humbled to be included in their sale and welcome any questions or inquiries.

John Patterson (406) 425-3210 | Mark Patterson (406) 425-2332

Health Protocol

- 8-18-24 Preconditioning Vaccine
 - 10-6-24 Weaned; 2nd Preconditioning vaccines. Poured Ivomec
 - 12-22-24 1st Pre-Breeding Shots. Poured Clean Up
 - 1-10-25 Bangs Vaccination
- 2nd round of Pre-Breeding shots will be given in advance of the sale.

Three quarters of this offering are out of L Bar W sires purchased by the Patterson Family of 3210 Angus.

THANK YOU

Our team is small but it is mighty. Taylor and Amanda are such a blessing to our operation. We are beyond thankful they chose us. For those of you who have never toured our operation, the bulls and heifers are developed at our Whitebird location. Taylor's main goal every year is to keep the bulls on track and healthy, and he is doing the best job. Amanda is always busy keeping the website fresh and up to date, keeping our Facebook page loaded with lots of day-to-day content, and helping me with the endless amounts of paperwork.

Words cannot express how thankful we are for the friends that have become family on this journey with us. It takes a village for this type of operation, and our village might be small but it's mighty. Thank you all for the help that you offer us each day of the year; your friendship means the world to us.

THE HEREFORD ADVANTAGE PROGRAM

Increase added market power and brand recognition with feeder cattle sired by a Hereford bull battery ranking in the top 50% for CHB\$ index.

PROGRAM BENEFITS:

- ✓ EPD ranking summary
- ✓ Added market exposure
- ✓ Genetic improvement tool
- ✓ Access to AHA resources
- ✓ Get started at HerefordFeederCattle.com

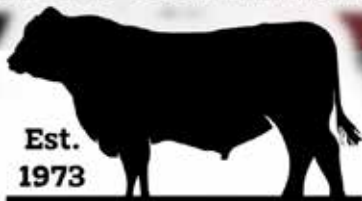

Certified Hereford Beef Index(CHB\$) is a terminal sire index that is built on a production system where Hereford bulls are used on Angus-based cows with a focus on feedlot performance and end-product merit. To qualify for the Hereford Advantage program, cattle must be sired by registered Hereford bulls with transferred ownership, and the Hereford bull battery must have a CHB\$ value ranking in the top 50%.

EXPLANATION OF BREED EPDS

CALVING EASE — DIRECT (CE)

CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average, if comparably mated, sire A's calves would have an 8 percent more likely chance of unassisted calving when compared to sire B's calves.

BIRTH WEIGHT (BW)

BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average, if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

WEANING WEIGHT (WW)

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves. Yearling Weight (YW) YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

MATERNAL MILK (MM)

The MM EPD of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

MATERNAL MILK & GROWTH (M&G)

The M&G EPD reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of the daughter's progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10 lb. (29 minus 10 = 19 lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

RIBEYE AREA (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

MARBLING (MARB)

MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, [IMF]) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

BALDY MATERNAL INDEX (\$BMI)

The BMI\$ is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Ribeye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

CERTIFIED HEREFORD BEEF INDEX (\$CHB)

The Certified Hereford Beef Index is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows and all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. Keep in mind, this production system takes advantage of complimentary breeding with the commercial Angus cow. Although Marbling is weighted positively in this index, a positive weighting for Rib-eye Area and a negative weighting for Back Fat are a greater priority in this index to allow for optimum end-product merit. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.
